

Application	Connected to turn detection sensors, the tachometers relays monitor the RPM of motors, turbines, generators, etc., to act on the selected detection points.		
Measurement magnitude	Revolutions per minute (RPM)		
Working mode			
Over-RPM detection	Relay status OFF: The relay activates when the number of RPM is greater than the adjusted value and deactivates when the number of RPM is 3% less than said value. Relay status ON: The relay acts in reverse to the operation indicated above.		
Low-RPM detection	When the supply voltage is connected, the relay is activated instantly and remains in this state for the set time. After this time: Relay status ON: if the number of RPM is less than the set value, the relay sin deactivates. It is activated when the RPM number is 3% higher than said value. Relay status OFF: The relay acts in reverse to the operation indicated above.		
Technical data			
Type of sensor	<ul style="list-style-type: none">· PNP o NPN, 3 wires. 10 mA / 24 VDC· Namur· Dry contact, potential free		
Operating ranges	<ul style="list-style-type: none">· 300: 30 .. 300 RPM· 3000: 300 .. 3000 RPM· 15000: 1500 .. 15000 RPM		
Hysteresis	3%, fixed.		
Response time	Equal to the interval between two consecutive pulses.		
Timing	Adjustable from 0 to 30 s, ± 10%. It only works in low-RPM detection, when the supply voltage is connected.		
Status Indication	<div><div><div></div><div></div><div></div></div><div></div><div>Yellow LED: Pulse input Red LED: Relay activated Green LED: Supply voltage</div></div>

Detection by low-RPM	Low-RPM Relay OFF	Low-RPM Relay ON	
			
Detection by over-RPM	Over-RPM Relay OFF	Over-RPM Relay ON	
			

Adjust mode		
Function		Select the working mode (over-RPM, under-RPM) and the status of the relay under normal working conditions.
Range		Select the full scale of the working range that most closely approximates, by the high side, the RPM value to be controlled.
R.P.M.		Adjust the trigger point taking into account the value selected in the RANGE button: · 300 : From 30 to 300 RPM · 3000 : From 300 to 3000 RPM · 15000 : From 1500 to 15000 RPM
Time		It only works in low-RPM detection mode: adjust the time it takes for the process to go into revolutions.
