CONDUCTIVE ELECTRODES

Description	Set of electrodes for the control of the level in conductive liquids. Usable in all type of tanks, opened or closed.
Body material / colour	PTFE / white
Electrode	SS AISI316 (1.4401). Ø 5 mm. The number of electrodes depends on the function of the required level control. Consult the specific characteristics of each level relay.
Electrode length	Standard, 1000 mm. Others lengths on request. All the electrodes are delivered at the same length. For setting the level detection points, cut each electrode to the required height. Keep in mind that the common electrode must have a length equal or longer than whichever other one.
Process connection	Top screw 1”1/2 G
Electrical connection	M12 connector. The female connector is not supplied.
Maximum temperature	+100 ºC
Pressure	1 Kg/cm^2 (to 20 ºC)
Electrode insulation	Optionally, the electrodes can be protected with Poliolefine insulation to guarentee the set detection points.
Protection	IP66
Usable with	Level relays for conductive liquids: relays families PN, DN and SN (see next page).
Warning	DISIBEINT ELECTRONIC SL is not responsible of the electric behavior of these electrodes when using control relays belonging another manufacturers.
